Education

Saigon University	2022 - Present
Major: Software Engineering	Expected Graduation: 2026

Skills

Programming	TypeScript, JavaScript, Java, SQL
Backend	NestJS, Spring Boot, ASP.NET Core Web API, RESTful APIs
Databases	PostgreSQL, MySQL, SQL Server, Redis, pgvector
Frontend	React, Next.js, HTML, CSS, Tailwind CSS
Architecture	Microservices, API Gateway, Service Discovery, RAG, Server-Sent Events
Tools	Git, GitHub, Docker, Postman, Prisma

Projects

AI Document Assistant [GitHub](#) | [Demo](#)

Personal Project | Mar 2026 - Apr 2026

Tech Stack: TypeScript, NestJS, Next.js, Prisma, PostgreSQL, pgvector, OpenRouter, React, Tailwind CSS

- Built a full-stack AI document assistant that supports document upload, text extraction, summarization, translation, text-to-speech, and chat-based question answering.
- Implemented a RAG pipeline for TXT, PDF, and DOCX documents, including content extraction, chunking, embedding generation, semantic search, and citation-based responses.
- Developed NestJS backend modules for documents, extraction jobs, chunks, embeddings, search, chat, summaries, translations, workspaces, and audio workflows.

MedBook Microservices System [GitHub](#) | [Demo](#)

Academic Project | Sep 2025 - Dec 2025

Tech Stack: Spring Boot, React, Spring AI, Microservices, RAG, Docker, Eureka Server, API Gateway, REST APIs, MySQL

- Developed backend services for patient, doctor, appointment, prescription, and payment workflows in a microservices-based medical management system.
- Built RESTful APIs with Spring Boot and integrated API Gateway, service discovery, and Dockerized deployment.
- Created a React frontend and an AI-powered chatbot using Spring AI and RAG to support appointment booking.

Vinh Khanh Audio Guide [GitHub](#) | [Demo](#)

Academic Team Project (4 members) | Jan 2026 - Apr 2026

Tech Stack: React, TypeScript, Vite, ASP.NET Core Web API, SQL Server, Redis, Leaflet, Recharts

- Contributed to the real-time user activity monitoring module for the admin dashboard in a 4-member team project.
- Implemented active-user tracking using session heartbeat, session IDs, Redis-backed session storage, database persistence, and Server-Sent Events.
- Built dashboard visualizations with interactive maps and charts to display online users, user distribution, and activity trends.
